

Setting up Passwordless Workstation Login.

LastPass Passwordless Workstation Login allows you to utilize LastPass Authenticator to login into your workstation - no password required. Using the secure biometric authentication technology of LastPass Authenticator, Passwordless Workstation Login enables you to seamlessly log into your machine, with a push notification to your mobile device. Passwordless Workstation Login increases the security of our organization, so we are less vulnerable to breaches.

Follow these steps to set-up Passwordless Workstation MFA.

1. Open the LastPass MFA application on your workstation

2. Click **Start setup**

Make sure your computer and phone are connected to the internet.

Start setup

3. Enter your LastPass email and click **Next**

LastPass email

LastPasstest@logmein.com

Not sure what to enter?
Contact your LastPass administrator.

Next
